## Welcome to the design of modern bathrooms.

Behind the scenes in the most stunning bathrooms in the world, you'll often find Geberit's special know-how. For more than a hundred years we have consistently set new standards in sanitary technology. Our innovative products offer a unique range of benefits: they are functional whilst being environmentally friendly, are easy to use and install, and are beautiful to look at. Our comprehensive product lines are designed for use in new construction as well as for renovation and modernisation projects. All of them have evolved from a single vision: to enable a sustainable improvement in quality of life and well-being by providing the best in sanitary solutions.

# Diverse systems. Everything for the bathroom. An overview.

## Shower 6

Wet rooms are the latest trend. Innovative drainage systems allow unusual design ideas to work as highly functional shower areas.

## Bath 10

Refining the bathing experience. Unique systems regulate water flow, drainage and overflow whilst increasing bathtub comfort.

## WC 12

Design has revolutionised the concept of the toilet. It's an ingenious hygiene system, an elaborate sanitary module and a perfectly placed designer object.

## Sustainability 32

The latest sanitary solutions for sustainable construction harmonise the demand for comfort with environmental responsibility in the interests of both man and nature.

## Technical details 34

An overview of the most important dimensions, so that the right products find the right places.

**Beauty in full flow.**  
Let the water flow.  
And show it where to go.

**DESIGN PLUS**  
powered by: **ISH**

Spaciousness and elegance account for the appeal of wet rooms. As the drain is often the only visible feature, Geberit's philosophy is to turn it into an aesthetic masterpiece. Now there are sleek drainage channels and clever drain cover designs, and our latest creation is the wall inlet drainage system for wet room showers. The innovative concealed Geberit shower element lets the water flow from water supply to the drain in wonderful harmony.

**Four drain cover options for a personal touch.**

Our understated drain covers are available in four finishes: Gloss chrome, brushed stainless steel, white, or a bespoke drain cover that can be fashioned from a tile of your choice.

**Magical wall inlet drainage for wet rooms.**

The innovative wall inlet drainage system from Geberit is perfectly in line with the aesthetics of wet rooms. The range of drain covers offers harmony with every style of bathroom and adds an unexpected touch of character. The new wall inlet drain has practical advantages too: the easily accessed hair trap can be removed to make cleaning quick and easy.

**Wet rooms on trend.**

The Geberit shower channel is an alternative finishing touch for wet rooms. The two covers of the shower channel are based on the popular materials stainless steel and enamel, providing a stylish finish to any modern bathroom.

# The basics for delightful bathing.

Increase your bathing pleasure.  
Make the right choice of trap.

The stresses of the day are literally washed away with a well earned bath. And the bathwater drains away easily too, with the help of a Geberit bathtub trap, which sets new standards in functionality, design and comfort. The Geberit PushControl bathtub trap is so flat that two people can share a relaxing bath in comfort.

**Bath time fun at the push of a button.**  
The PushControl bathtub trap received the iF product design award 2008. It allows the outlet to be opened and closed easily at the push of a button. Its flat profile has a unique design and provides more comfort in the bathtub, as there's nothing getting in the way of relaxation.

**Perfect for inflow and outflow.**  
Geberit bathtub traps are a perfect synthesis of design and function. As water flows into the bathtub via the overflow, the usual hardware for water inflow is unnecessary. Geberit bathtub traps are available in typical sanitary finishes: gloss chrome or white.

# Prize winning geometric form. Contemporary art for the bathroom. Put it almost anywhere.

When it comes to renovation, lack of ideas is seldom the problem. On the other hand, existing plumbing often gets in the way of turning the ideas into reality. The Geberit Monolith provides a way to replace an existing WC with a fascinating piece of design. The flexible sanitary module, with an integral cistern, can be installed without making structural alterations, and it becomes a compact sculpture between the wall and the WC pan.

# Impressively simple.

With a variety  
of possible combinations.

There is no need for any complex and costly installations to achieve stylish WC design in the bathroom. Geberit Monolith conceals all of the necessary technology behind a simple design concept which is easy to install and offers plenty of scope for creativity. With its colourful safety glass – available in black, white or mint, the Geberit Monolith can be combined with an elegant floor-standing or wall-hung WC pan and cuts a fine figure in the bathroom. This internationally award-winning piece of design can also be used in combination with the Geberit AquaClean 8000 and 8000*plus* models.

# Well-being at the heart of your bathroom.

Geberit AquaClean –  
the WC that cleans you with water.

Water has always been of central importance to daily personal hygiene. In many cultures, cleaning with water after using the toilet is taken for granted. Geberit AquaClean combines the most natural cleansing with the best in comfort and beautiful design. Discover a new kind of personal hygiene that is gentle, natural and provides a sense of well-being with Geberit AquaClean, the WC that cleans you with water.

# Customised comfort.

## The right model for every home and lifestyle.

From the easy to install WC enhancement solution to the fully integrated WC complete solution, Geberit AquaClean offers the perfect model for every home and lifestyle. All of the models have one thing in common: a warm jet of water washes you gently and cleanly, at the push of a button. You can decide for yourself just how much comfort and how many different functions you want from your Geberit AquaClean, to bring a new level of comfort to your bathroom.

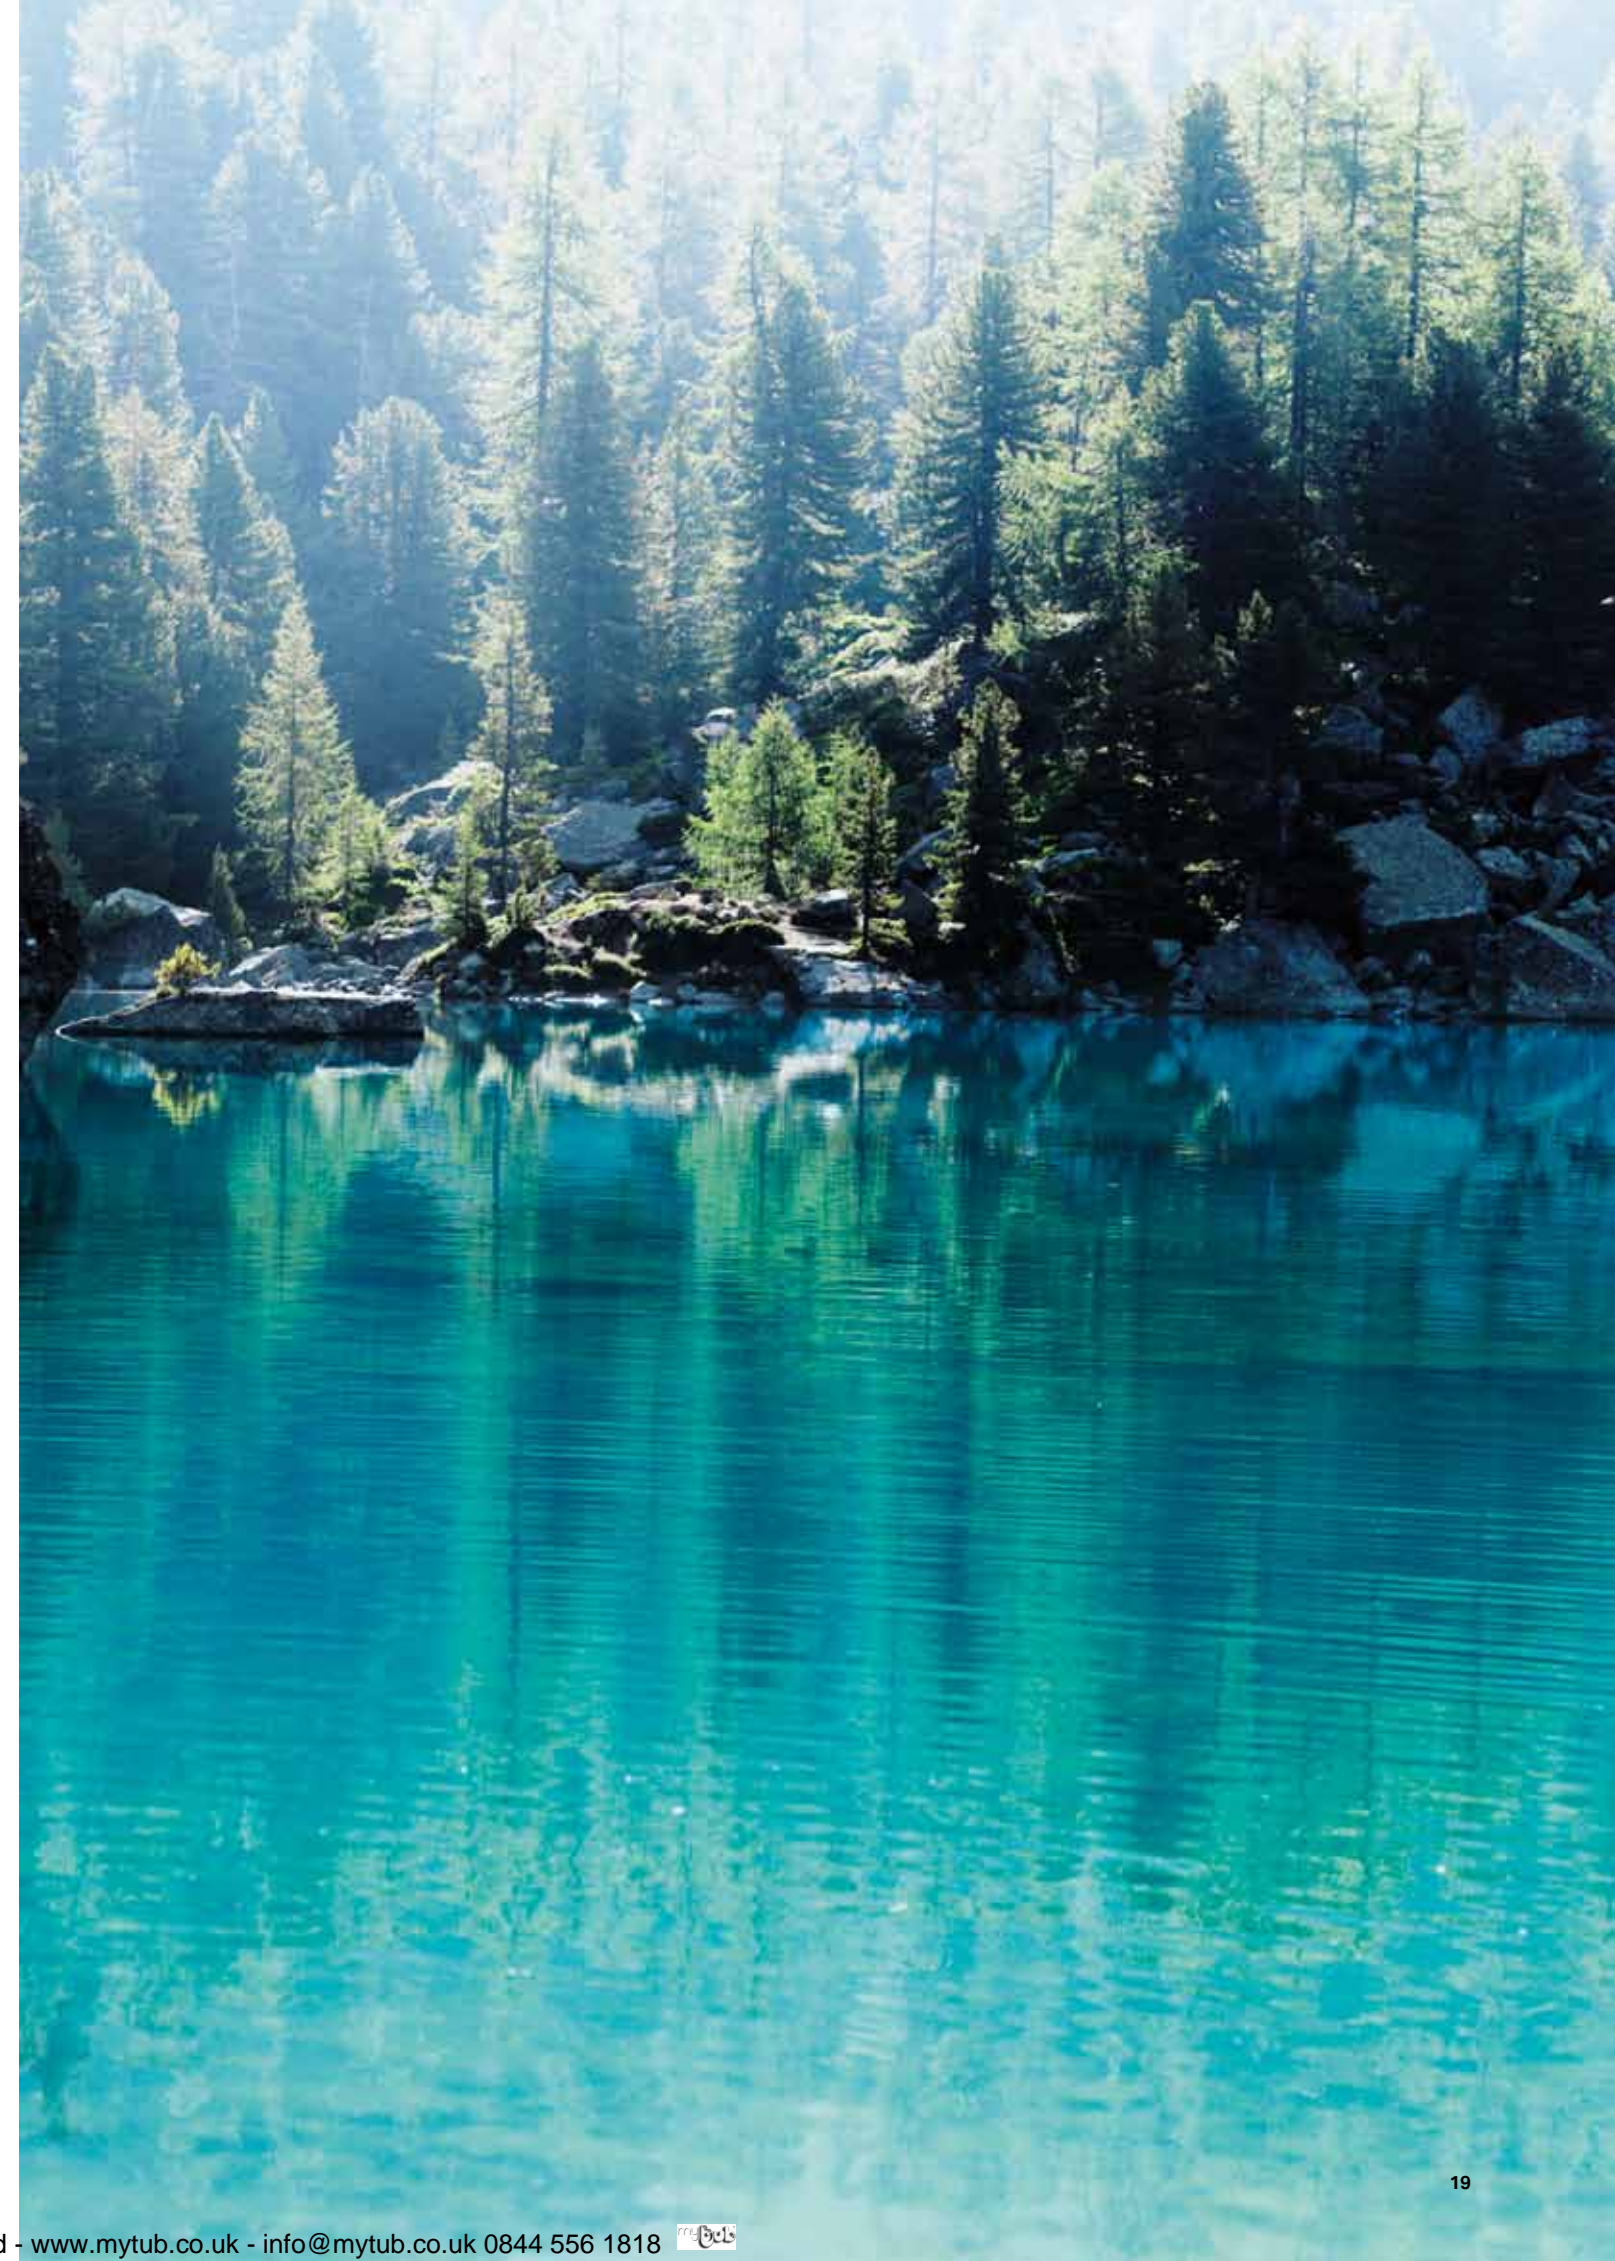

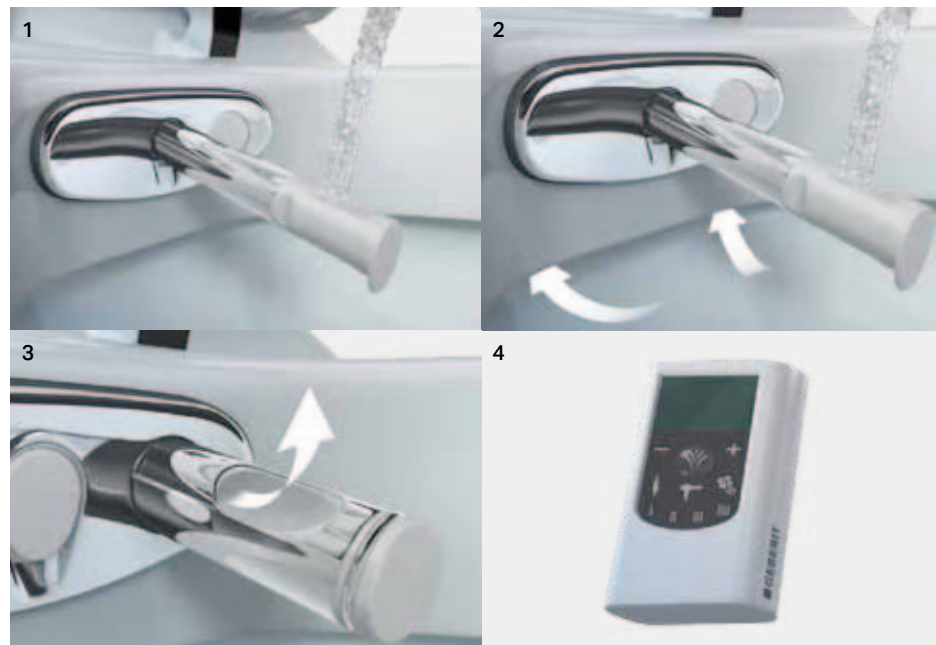

### Geberit AquaClean 8000plus: The deluxe pampering programme.

1 The intensity, temperature and properties of the jet of water can be individually adjusted.

2 Beneficial for all the senses: the odour extraction system starts up as soon as you sit down.

3 Drying yourself with warm air is extremely comfortable and gentler on your skin.

4 Adjust all functions to suit your preferences, save them and then retrieve them again at any time.

# Ambience with depth.

Design at the forefront.  
And behind it, our system.

Every bathroom should be an oasis for relaxation. Stylishly designed for personal care and for regeneration. Geberit installation systems show off everything that's worth seeing. And using a lot of technical cleverness, everything else disappears behind the wall and out of sight. This brings practical advantages in addition to aesthetic ones: more space, easier cleaning and, in the case of wall-hung toilets, the possibility to adjust the height to individual requirements.

old bathroom

Renovation projects are often limited to simply replacing the various items of sanitaryware in the bathroom. A complete redesign, while aesthetically appealing, often seems too complicated. Geberit installation systems create the structure and the space for the necessary plumbing behind the scenes, so that for instance the positioning of the toilet in the bathroom can be changed easily. This flexibility means that any bathroom can become the one of your dreams.

**Technology that makes dreams come true.**  
Take an old bathroom.  
And design a new one.

# Fit for flexibility.

A few systems.  
And endless possibilities.

With Geberit, there are almost no obstacles to your freedom when choosing the placement of sanitaryware in new construction and in renovation projects. Whether under a window or a pitched roof, the WC can go where you want it to go. Built-in modules create elegance and space, and easy PreWall systems can be used everywhere, offering additional storage possibilities.

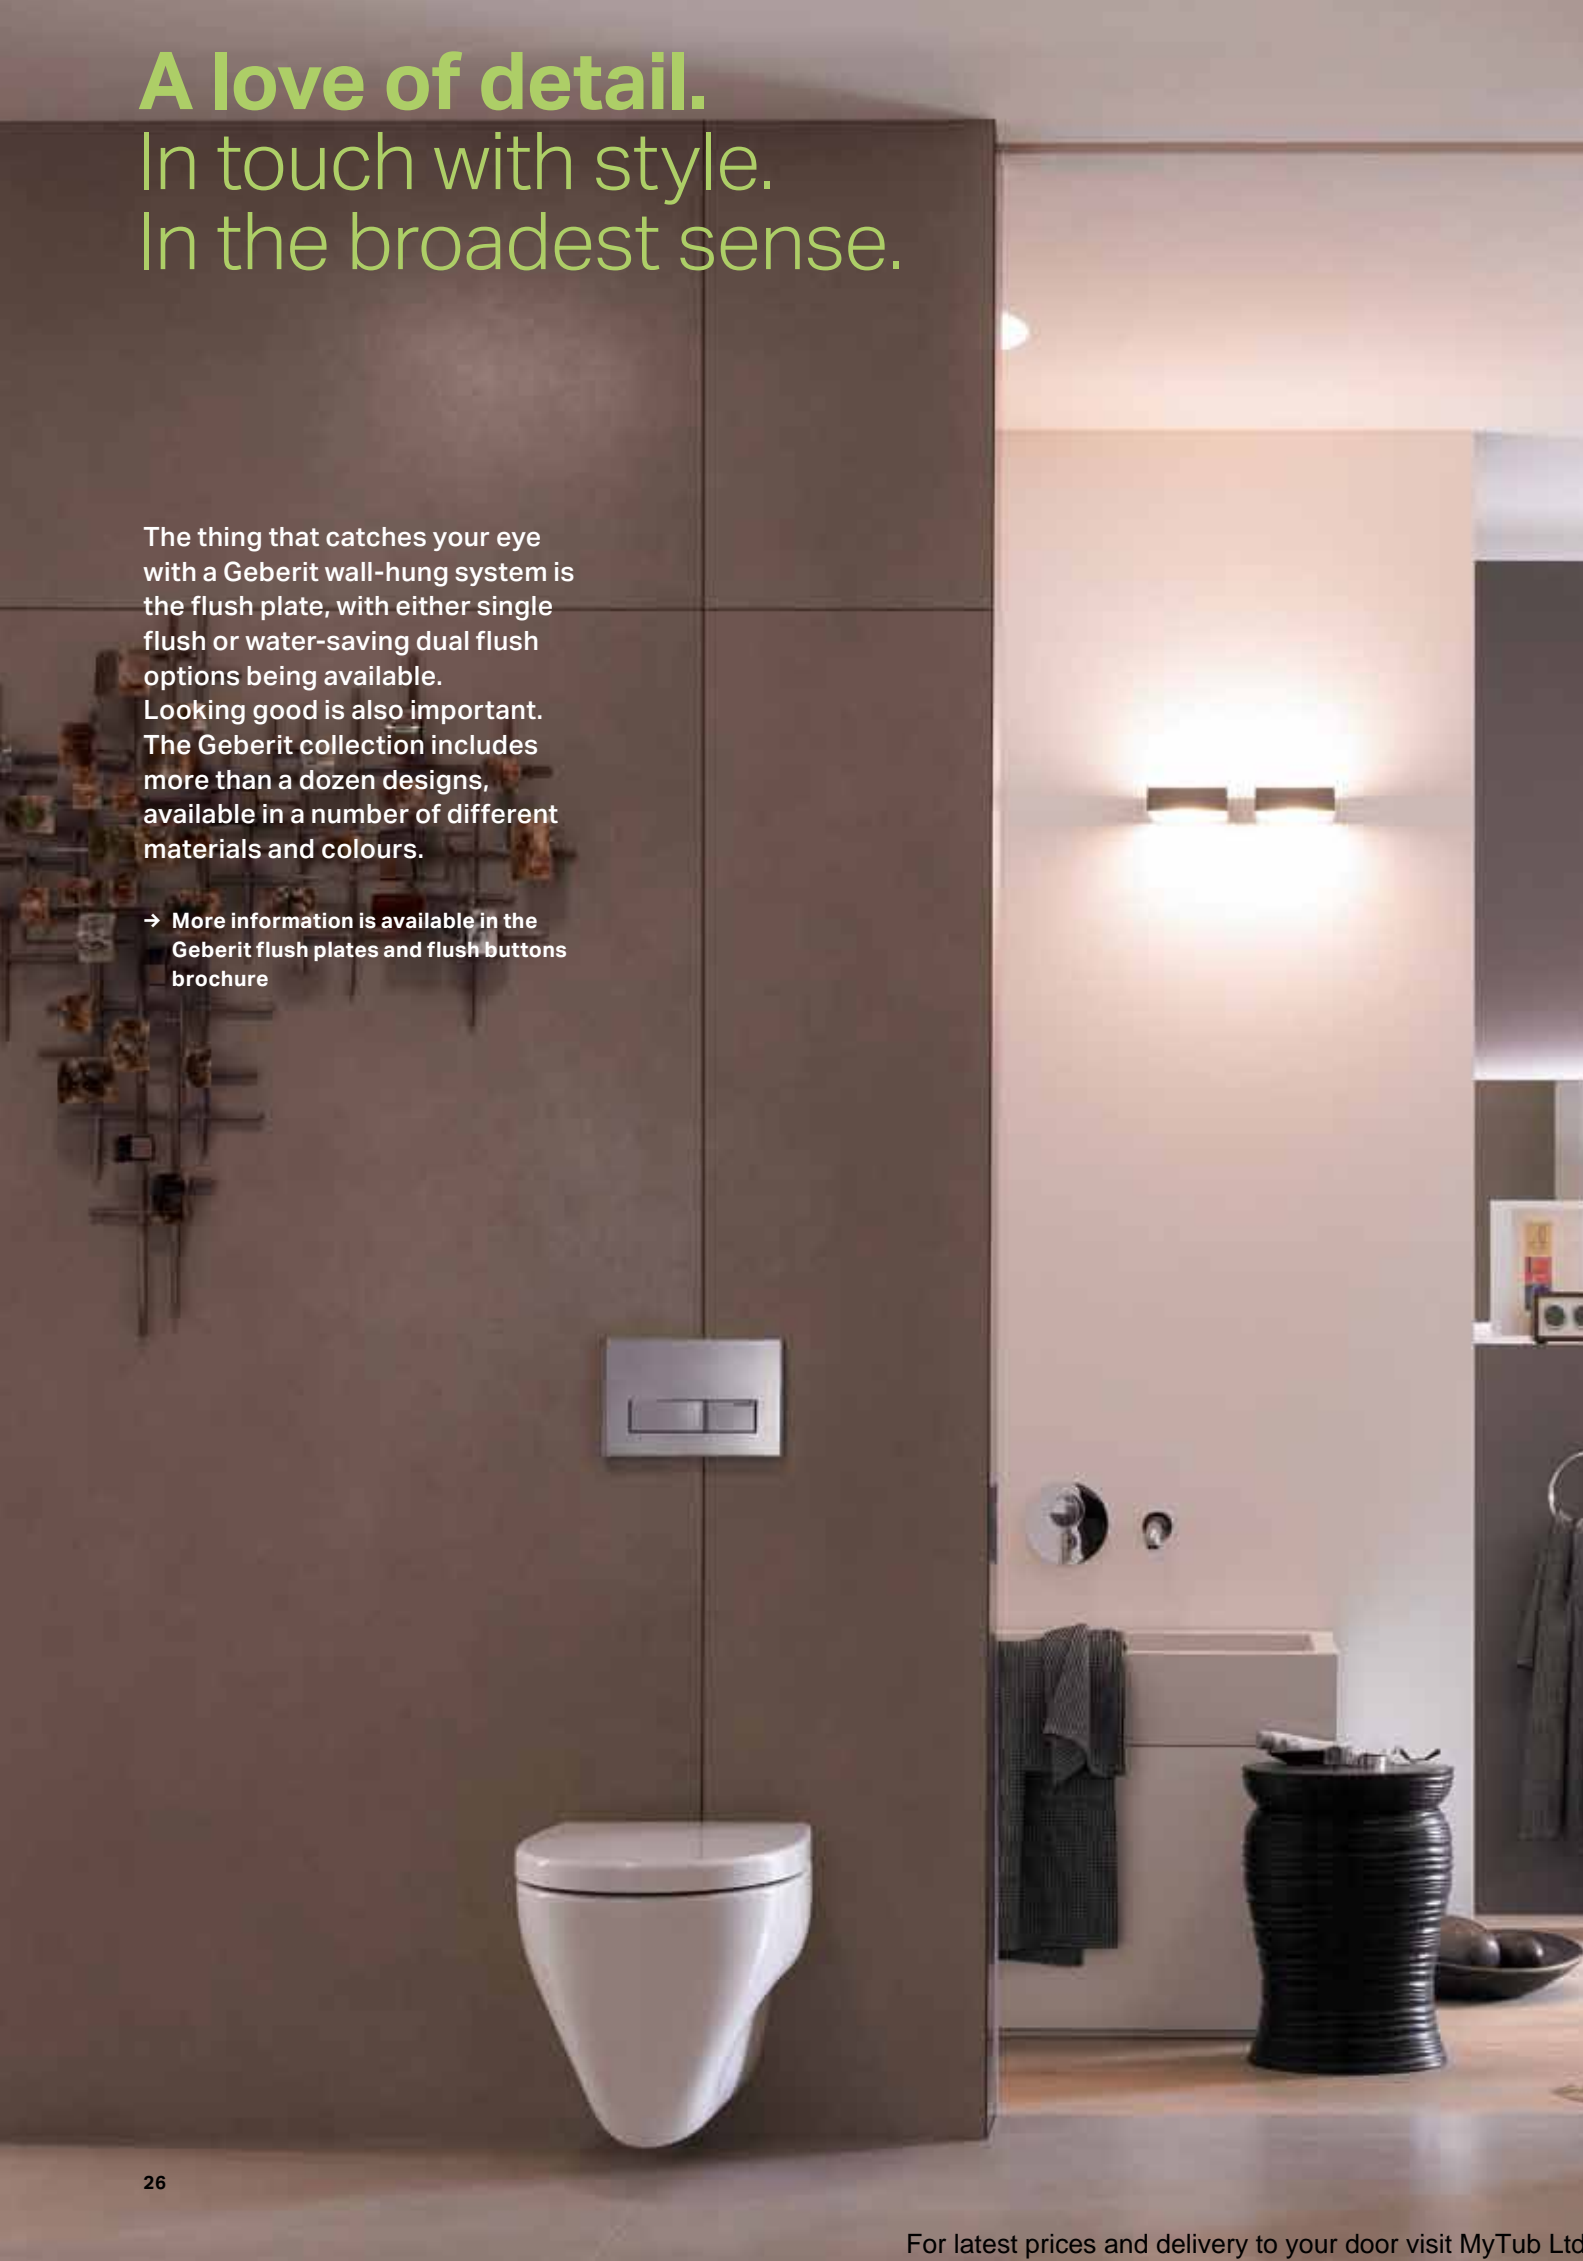

# A love of detail. In touch with style. In the broadest sense.

The thing that catches your eye with a Geberit wall-hung system is the flush plate, with either single flush or water-saving dual flush options being available. Looking good is also important. The Geberit collection includes more than a dozen designs, available in a number of different materials and colours.

# Maximum scope for detail.

Thanks to the versatility of Sigma50.

The colour schemes and material combination you choose for your bathroom are essential aspects of its design. Both colours and materials have a distinctive impact on the atmosphere of the room and enable the installed taps, bathtub, basins and WC to be shown in their best light. With this in mind, we have developed various solutions for WC actuator plates, designed to blend in harmoniously or to give stylish detail. Sigma50 gives you the freedom to create something unique out of your actuator plate or to adapt it to perfectly suit its surroundings. The design is limited only by your imagination.

The cleanliness and freshness so often associated with placing a cleaning block into the toilet cistern is now possible with concealed cisterns too, thanks to insert for in-cistern blocks. A convenient accessory for the Geberit Sigma flush plates, it is easily accessible to replace the cleaning block when required.

# For generations.

## Geberit wall-hung systems.

Geberit WC wall-hung systems have been used successfully all over the world for more than 40 years. These space-saving systems are distinguished not only by their attractive design but also by their excellent reliability, allowing you to enjoy your bathroom for longer. This keen awareness of quality is evident with our 25-year spare part availability guarantee on all functional parts within Geberit concealed cisterns. Find out more about our wall-hung systems at → [www.geberit.co.uk/wall-hung](http://www.geberit.co.uk/wall-hung) or for further literature call 0800 007 5133.

**Inspired by nature.**  
Sustainable sanitary technology.  
Wisely thinking ahead.

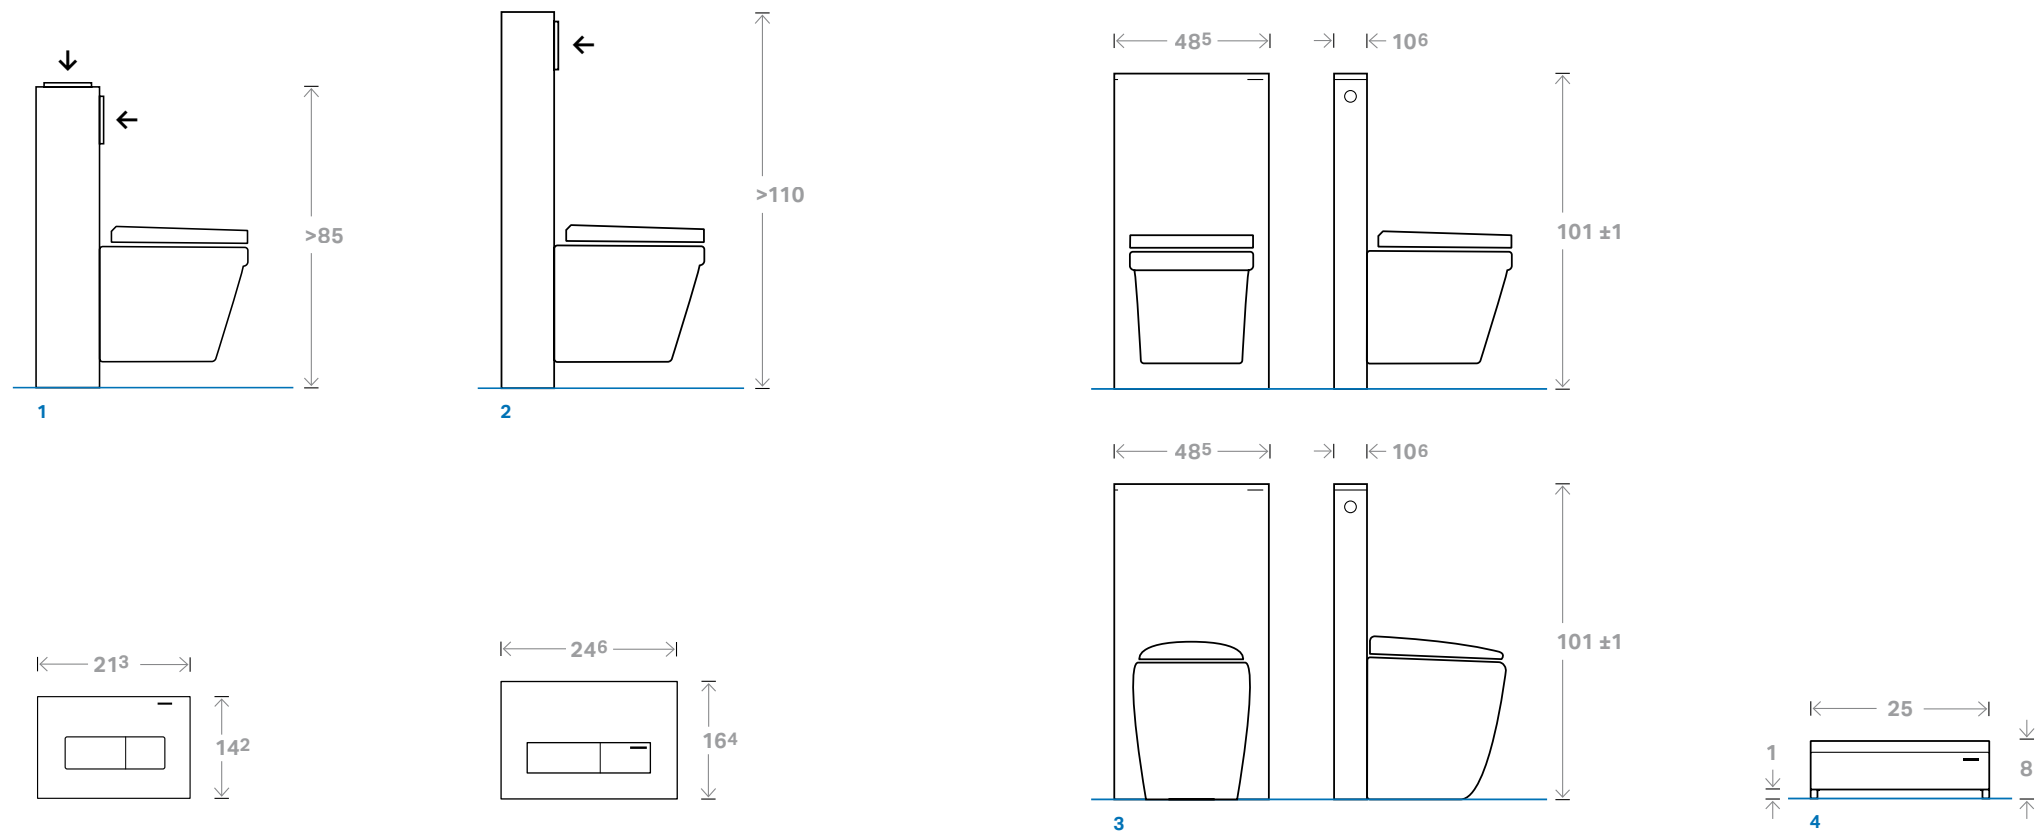

Involvement in sustainable construction is an essential commitment today, and Geberit is an active participant in its worldwide development. Economical, low-noise, flexible and long-lasting products for sanitary applications make a useful contribution to future conservation of water and energy, noise reduction and consumption of raw materials. Geberit conducts its own basic research into sustainability and quickly applies the lessons learned to create even better sanitary solutions.

# Don't leave planning to chance.

Well-being starts with good planning.

## 1 Geberit WC element with UP200

- The Geberit UP200 requires a minimum installation height of 85 cm
- PreWall depth at least 17 cm
- Actuation from front or top with Kappa flush plates (see page 27 for further options)
- Guaranteed availability of functional spare parts for 25 years

## 2 Geberit WC element with UP320/UP720

- The Geberit UP320/UP720 requires a minimum installation height of 110 cm
- PreWall depth at least 12 cm (UP320) or only 8 cm (UP720)
