

■ GEBERIT

Concealed Cisterns

March 2008

UP200 and UP320

- 6 or 3 litre dual flush cistern
- Impuls380, low noise side fill valve (0.1-1 bar)
- Detachable flush bend (UP320)
- Brackets and fixings
- Isolating servicing valve
- Access through the removable flush plate

The UP200 and UP320 not only helps you to save space, but can also save water through 6/3 litre dual flush operation.

Built into a wall or duct, it is ideal for minimal space as access is gained through the flush plate. This is placed on the front of the cistern on the UP320 and front or top with the UP200. The UP320 can be fitted with the latest flush plate designs of the Sigma range and the Bolero, Rumba, Samba, Twist, Tango and Mambo. The UP200 can be fitted with the Artline flush plate and Kappa range of flush plates.

The flush plate is the only visible element of the system and many different styles, colours and finishes are available to suit any bathroom design.

Access to the concealed cistern via the flush plate.

Furniture Cisterns

Geberit's low height concealed cisterns are especially designed to fit even the smallest furniture units on the market and can operate as low as 790mm. Designed with water saving in mind, the 6/3 litre dual flush system can be operated by either a pneumatic or mechanical button small enough to be discrete, but with excellent functionality.

The easy to fit cistern can be accessed for maintenance simply through the removable front panel of the furniture unit, or from the top via a removable shelf.

- 6 or 3 litre dual flush cistern
- Impuls360 bottom fill valve (0.1-10 bar, 1/2" BSP connection)
- Flush pipe can be cut down to fit
- Top or front access

Easy access to the cistern via the removable front panel. Picture shows pneumatic button.

AP123

- 6 litre single flush cistern
- Impuls380, low noise side fill valve (0.1-1 bar)
- Flush pipe can be cut down to fit

The AP123 offers a subtle, yet striking look to any bathroom with the 6 litre single flush cistern hidden behind a wall.

The cistern can be accessed from above, via a removable shelf, and utilises Geberit's wide range of pneumatic flush buttons. These stylish buttons, available in chrome and stainless steel, provide a minimalist alternative to our extensive range of flush plates.

Access to the cistern via removable shelf.

Metal pneumatic finger push.

Plastic pneumatic palm push.

Concealed plumbing, unmistakable style.

We all like to express ourselves in our homes, to make a haven where we can relax by imparting a little of our personalities into the decoration and styling of rooms.

This is especially important in the bathroom, a place with limited space where you need the ability to feel comfortable and unwind. Geberit's range of concealed cisterns maximise the space in even the smallest rooms, whilst giving you the flexibility to create a classic style bathroom where you can feel truly at home. Concealed systems retain the floor-standing WC look, but add an extra contemporary dimension to the design of your bathroom by hiding unsightly plumbing to create smooth, clean lines that contribute to a stunning and understated bathroom.

Access all areas

Accessibility is not an issue with Geberit concealed cisterns. Maintenance can be quickly and easily carried out through the wide range of flush plates available, or by means of a removable shelf for cisterns without flush plates. This means the decor in your bathroom need not be disturbed in the unlikely event of any maintenance being required.
