aquanomic

With an eye to the future, Leisure Sinks have put together a new range of kitchen taps under the Aquanomic name, already approved to meet the latest proposed building regulations in accordance with the code for sustainable homes.

Any new home will need to have a code rating, which are based upon standards set by the government. Homes with higher ratings will be more energy efficient, and for the home owner there is less waste and lower running costs.

See page 24 for more information on the Aquanomic taps.

Leisure Sinks is the largest manufacturer of kitchen sinks in the UK. With more than 70 years experience and a reputation for excellence, we're able to offer a wide range of high quality sinks and taps for you to choose from. Leisure sinks come in a variety of styles and materials including stainless steel, composite and ceramic designs to complement your lifestyle perfectly and are guaranteed to perform.

An AGA Company

leisure quality & awards

At Leisure we work hard to ensure the quality of our sinks & taps are consistently high, focusing on the best materials, the highest levels of workmanship, and a dedication to excellence that's second to none. However, we don't expect you to just take our word for it: our products are regularly tested by independent inspectors to guarantee we keep standards high. Continuous assessment and ongoing investment in the quality of both materials and construction is essential to our philosophy and have enabled us to become Britians most widely used sink brand.

Kitemark

A world-renowned symbol of trust, integrity and quality, Leisure is proud that a number of its products have earned the BSI Kitemark seal of approval. Auditing the superiority of our sinks as well as the quality management systems we have in place on a regular basis, the Kitemark is indisputable proof of manufacturing distinction. The Kitemark is not easy to attain, which is perhaps why it offers unprecedented peace of mind. Furthermore, recent polls reveal that more than 60% of consumers would choose a product affixed with the BSI Kitemark over a similarly priced product.

ISO14001

Reassuring our customers that we are committed to protecting the environment, Leisure Sinks conform to the International Standard BS EN ISO14001: 2004, which monitors our Environmental Management System. Designed to ensure ongoing commitment to environmentally-friendly manufacturing at every level of production, our systems are audited every six months by a UK government approved assessment authority. Even this brochure has been printed on FSC approved paper to minimise the impact on our environment.

ISO9001

One of the fundamental purposes of the International Standard BS EN ISO 9001: 2000 is to assure our customers that we have a fully integrated Quality Management System in place at all levels of operations. Only by continually updating and enhancing our Quality Management in-line with regulatory requirements, are we able to guarantee the consistent quality that our customers have come to expect from the Leisure brand.

made in the UK

We are proud of the fact that virtually all of our sinks are still manufactured right here in the UK. We are constantly investing new technology and skills into the UK plant to ensure continued manufacturing here. Combining tradition with the latest technologies we work hard to keep our environmental impact to a minimum and our employment as local as possible.

materials & guarantees

With more than 80 years experience to our name, Leisure Sinks is the biggest manufacturer of sinks in the UK and has built its reputation on quality, consistency and longevity. Leisure Sinks are available in stainless steel, composite and ceramic finishes and in designs that suit both modern and traditional homes. Guaranteed to last up to 20 years – often longer than the lifetime of a kitchen - you can trust Leisure Sinks to provide perfect performance every time.

stainless steel

Made from high grade 18/10 stainless steel with seamless soldering and a rigid frame construction, our steel sinks are heavy duty in construction and won't bend or flex under pressure. For extra scratch resistance, choose between Linen or Brushed Steel finishes. Those seeking a modern high-shine surface can opt for Satin Steel or the even shinier Polished Steel finish.

Pages 6 - 18

composite

Constructed from an exclusive compound developed over many years, our composite sinks feature 70% quartz particles for a unique surface that's similar to granite in terms of durability but much more flexible in design. Offering high scratch and impact resistance, our composite sinks are easy to clean and can withstand temperatures up to 230°C so can safely accommodate hot pans and boiling liquids. Available in a range of colours, these sinks are ergonomically designed with soft, tactile curves, to perfectly match your kitchen.

Pages 19 - 22

fire-clay ceramic

The benefits of buying a ceramic sink can be found in their completely non-porous, stain-proof surface that won't fade or discolour. Perfect for the more traditional home or those looking to coordinate modern white worktops, Leisure's heavyweight fire-clay ceramic sinks are made using high quality raw materials alongside tried and tested manufacturing techniques to achieve perfect results time after time.

shallow bowl with heat protection

The new shallow bowl addition to the Lexin range features pads on the base to reduce sound and heat transfer from hot water within the bowl when the sink base is open. This advance considers kitchen designs for wheelchair access, averting burns when skin contacts the underside of the sink, whilst the 120mm depth bowl provides a solution for those with less reach.

composite sink materials & colours

Neostone

Neostone incorporates 70% quartz particles creating a unique granite-effect finish which is incredibly durable, highly scratch resistant and can withstand temperatures of up to 230 degrees centigrade.

Velstra

Velstra, a similarly advanced material is equally practical offering both durability and superior hygienic properties in a range of solid colours.

aquanomic taps

With an eye to the future, Leisure Sinks have put together a range of kitchen taps under the Aquanomic name, already approved to meet the latest proposed building regulations in accordance with the code for sustainable homes, set by the government.

Homes with higher ratings will be more energy efficient, and for the home owner there is less waste and lower running costs. Fitted with a flow restrictor, the Aquanomic taps have been developed to help comply with the water category of the code by restricting the flow rate to 3.8ltrs per minute per tap. The amount of water usage in the home is monitored and by using an Aquanomic tap, will help comply with these regulations.

Leisure Sinks continuously seeks improvements in specification, design and production of products and thus, alterations take place periodically. Whilst every effort is made to produce up-to-date literature, this brochure should not be regarded as an infallible guide to current specification, nor does it constitute an offer for the sale of any particular product.
