INTRODUCTION

03

The **Trade** Collection from Astracast® is dedicated to providing superior kitchen products in a way that serves the needs of the architect, developer, merchant and contractor

Forming part of the Astracast product range, the Trade Collection traces its heritage from the combination of two brands with a long heritage of manufacturing products for the construction sector, Pland Stainless and Fordham.

Pland Stainless, originally incorporated in 1919 as the Taylor Tool and File Company has been manufacturing stainless steel products for over 80 years, with the first sinks manufactured in 1936.

During the war years, the company converted production to steel pans and mess plates, before re-commencing sink manufacture in the mid-1940's. It was at this time that it started to lead the UK Stainless Steel Sink market with its many product innovations. It was the first company to introduce custom-made accessories for its sink products, something that has since been emulated by the rest of the market.

Fordham was a brand of equal pedigree and manufacturing heritage. Its beginnings started in Steel Pressings in 1924 as the Fordham Pressings Company Limited and is still a leading force in the supply of quality bathroom products to the merchant sector.

In 1982, Fordham Bathrooms diversified into the new manufacturing technologies in composites, forming Fordham Kitchen Products Limited and in 1994 Fordham and Pland joined together offering the best products from both brands.

The turn of the century saw Fordham Pland become a division of the world-renowned Jacuzzi® Corporation, as part of Astracast. This history of manufacturing excellence combined with current insightful innovation and design has led to Astracast enviable position as market leader in terms of quality and design, manufacturing unrivalled superior kitchen products.

WELCOME TO THE
ASTRACAST
TRADE COLLECTION

SERVICE

Astracast have a dedicated nationwide sales support team that is geared towards providing expert assistance and professional service. Astracast pride themselves on setting new standards of product and service quality within the industry. Astracast have also added a dedicated Contracts Support Team, committed to looking after the often unique requirements of medium to large scale development projects, tenders and municipal buildings.

STOCK

As would be expected from a manufacturer with Astracast's heritage and focus, all products within the range are readily available. Astracast's advanced stock control systems ensure that the right product is available when it's required.

VALUE

Every effort is made to ensure that the Astracast products are not only fit-for-purpose, but offer the best value-based proposition in the market. Astracast are always at the forefront of innovation, ensuring that promises are kept both, in the kitchen and on the balance sheet.

QUALITY

All Astracast products are manufactured in accordance with the strict quality procedures of ISO 9001: 2000 and where appropriate:

BS EN 13310:2003: Kitchen sinks functional requirements and test methods.

BS EN 695: (Latest Issue) Kitchen sinks – Connecting Dimensions.

BS1449: Part 2: (Latest Issue) Steel plate, sheet and strip. Specifications for stainless and heat-resisting plate, sheet and strip.

In addition, our commitment to design and investment in manufacturing has been acknowledged with the award of ISO 9001: 2000. This international standard reflects high levels of design, development, manufacture and quality assurance, guaranteeing consistently high standards throughout the entire range.

Astracast, with simplicity in mind, have developed a range of PACK OPTIONS. A pack option is available where you see this logo, alternatively refer to page 33 of this brochure.

PREMIUM PACKS

Include the Dove tap (the most popular compression tap design in the UK), wastes and easy-to-fit pipework (as appropriate).

DELUXE PACKS

Include the Targa/Finesse tap (the most popular ceramic disc tap designs in the UK), wastes and easy-to-fit pipework (as appropriate).

GUARANTEE

All Astracast products have a comprehensive guarantee that covers the sink against the unlikely event of any material or manufacturing defect. This guarantee is just one part of Astracast's commitment to total quality, assuring you that the sink you select will give high performance and trouble-free operation for years to come.

GLOSSARY

FINISH

The finish is the surface texture or appearance of the sink. Astracast have a number of steel finishes available from highly polished to a heavily textured 'linen' finish, plus various composite materials.

REVERSIBLE

The drainer of the sink can be fitted on either the right or left. Look out for this logo which specifies which sinks are reversible.

TAP HOLES

These are the holes where a tap is to be fitted. Astracast sinks have either one or two tap holes, suitable for either monobloc or deck/pillar taps.

BASKET STRAINER WASTE / PLUG

A Basket Strainer Waste (BSW) is a special waste kit that fits into the sink plug hole. This prevents large objects entering and potentially blocking the plumbing system. A plug waste is the traditional style of waste kit that incorporates a rubber bung to cover the plug hole.

WASTE KIT

A waste kit refers to the combination of parts that make up the plug hole and overflow of the sink water disposal system.

QUARTER TURN / COMPRESSION TAPS

A Quarter Turn valve is composed of two ceramic discs that mean the handle only needs to be turned a relatively short distance from off to full flow. A Compression valve is the traditional style of valve, utilising a rubber washer and screw system to turn the tap on and off. This means the handle often needs to be rotated a number of times for the tap to move between on and off positions.

NITTO COATING

This is the plastic protective film that covers the Stainless Steel sink during transportation.

PIPEWORK

This is the pipe/bends that connect multiple bowls to the waste kits.

VALUE PACKS

Include either the Cygnet or Focus taps (both compression valve taps offer a cost effective alternative to the Dove Mixer), wastes and easy-to-fit pipework (as appropriate).

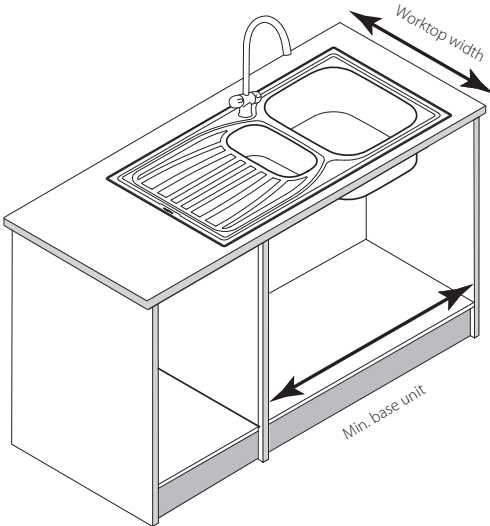

UTILITY PACKS

Include either the Dove Deck Mixer tap or Dove Pillar taps (using the compression valve design) and wastes.

NEW pop-up covered waste system

A brand new patented* innovation that will change the look of your sink!

The new pop-up covered waste system provides a more contemporary alternative to traditional designs. It has a stainless steel canopy which incorporates an easy-to-use push-up/down mechanism. The internal soft basket membrane is hygienic and easier to clean than standard wastes. The waste system can be fitted to any sink with a standard 90mm aperture.

ONLY £15.00

INSET SINK

UNDERMOUNT SINK

SIT-ON SINK

INSTALLATION

05

COUNTER & CABINET SIZE

Your sink choice is influenced by both the worktop width and cabinet size. Each model has the 'Minimum base unit' information shown.

For Inset models – the 'Min. base unit' is the smallest typical base unit size that will accommodate the sink bowl(s) and the tap.

The worktop width must allow for the overall width of the sink, any movement when using your chosen tap and a suitable thickness around the sink cut out front and back so the worktop will not be weakened.

For Sit-on models – the 'Min. base unit' refers to the base units that are required to support the entire length of the sink. The worktop width will typically be 500mm or 600mm, but should be 30mm deep to match the sink front.

For Undermount models – the 'Min. base unit' refers to the cabinet size that is required to accommodate the bowl(s) in their longest orientation.

Typically, Undermounted sinks are suited to granite, hardwood or solid surfaces.

INSTALLATIONS

Different methods of integrating a sink into a worktop have been developed over the years. Kitchen sinks are traditionally fitted using the Inset method, with the rim of the sink sitting on top of the worksurface.

Sit-on mounting makes the sink and worktop look more like one unit. With solid surface worksurfaces such as marble or granite, undermounting the sink has become increasingly popular. The sink is mounted to the underside of the worksurface.

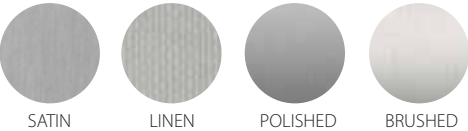

Undermounting gives a clean, uncluttered look and prevents dirt from becoming trapped around or below the rim.

Every Inset sink supplied comes complete with clips, seals and all stainless steel models benefit from protective coating for delivery and earthing tags for safety.

MATERIALS

Stainless Steel

Astracast stainless steel sinks are manufactured from premium quality stainless steel offering long-lasting corrosion protection that guarantees problem-free use throughout their life. **Linen finish** gives a contemporary textured appearance and helps to mask minor marks and scratches, extending the good looks of the sink when in use.

Granite ROK®

Containing natural rock particles, Granite ROK® breathes life into any kitchen with its unique depth of colour, texture and character. Ultimate levels of durability and performance have been achieved ensuring that Granite ROK® maintains its natural granite feel and appearance.

ROK® Metallic

is a unique granite material whereby metallic effect particles are added during the manufacturing process. The resulting sink has striking good looks and complements contemporary kitchen environments perfectly.

Quartz

is a pure solid colour material that contains natural quartz particles, providing extreme durability and the high performance standards demanded by your end users.

Teflite™

This high performance material is available in two versatile colours. With its resistance to chipping, scratching and staining, Teflite™ represents good value for money at the budget end of the Astracast range.

Ceramic

Cool and silky to the touch, ceramic sinks are tougher than they look and offer a hard, non-porous surface giving excellent resistance to all commonly used chemicals and detergents and are extremely resistant to heat.

COMPOSITE MATERIALS RESISTANCE

All Astracast Composite sinks are designed to offer ultimate material performance, yet are easy to clean and are resistant to nearly all household chemicals.

Resistance to Thermal Shock

Exposure to extreme variations in temperature can sometimes have an adverse effect on the durability of the sink. Astracast sinks are designed and tested to withstand repeated cycles of hot and cold temperatures without effect.

Resistance to Stains

The low material porosity denies staining agents the opportunity to penetrate the surface. Even the worst stains, such as red wine and beetroot, are easily wiped away with a cloth.

Water and Light Resistance

Astracast's materials are screened by world-renowned colour

laboratories to ensure that their sinks will not discolour in direct sunlight or water whiten over time, unlike inferior products.

Impact and Scratch Resistant

Astracast sinks are designed to resist everyday knocks and bumps in the most of hectic kitchen environments without chipping or marking. This ensures that the finish of the sink and the cleaning benefits that go with it remain for the products life span.

Resistance to Chemicals

Astracast materials innovative molecular structure ensures that all sinks are resistant to the most commonly used household chemicals.

STAINLESS STEEL

07

luxury inset

The Montreux range of sinks has two distinctive models. Both sinks have an elegant linear drainer pattern and the unique Astracast Aquature™ waste system as standard. Double-edged profiles and recessed drainers minimise spills and the subsequent potential for water damage to worktops and walls. A raised tap deck allows for the fitting of larger, modern taps. Available in Premium Brushed Steel finish.

All measurements are in millimetres unless otherwise stated.

STAINLESS STEEL

11

feature inset or undermount

The Onyx Flush range of Inset/Undermount sinks offers modern design and versatility to all kitchen environments. Three bowl dimension choices are available, as well as an innovative drainer area that offers various configuration options. Both bowls and drainer feature radiused corners for easy cleaning – as well as a range of accessories ideal during food preparation.

The Onyx sinks, manufactured from Premium Brushed Steel, offer ultimate fitting versatility with the ability to be Inset or Undermounted allowing for fitting into any worktop material, including laminates.

Standard Inset fitting allows for simple DIY installation into laminate worktops giving the look and feel of a designer undermount sink without the expense of rounding and polishing granite edges. A 15mm profile around the sink allows for classic Undermount fitting into any solid surface worktop – enhancing the aesthetic quality of any kitchen environment.

undermount

The **Opal** range of classic, Undermount sinks offer a wide choice in size and shape and are designed to complement granite and hardwood surfaces. The Opal Premium Stainless Steel sinks feature unique sound deadening spray – the innovative spray covers the entire back face of the sink totally eliminating sound resonance and insulating the bowl, preventing heat loss and maintaining water temperature for longer.

The **Eclipse Superdeep**, as the name suggests, boasts a large, deep bowl; the largest bowl of its type, holding an incredible 43 litres. With the advent of dishwashers, the need for sinks that can accommodate large, non-dishwasher items, such as baking trays and grill pans, has come to the fore. The Eclipse Superdeep satisfies consumers demand for larger bowls.

JADE M500

Astracast's desire to service all sectors of the market has driven the development of the **DAP** sink. This innovative product has been designed specifically with the wheelchair user in mind. It has an extra shallow bowl to allow closer access to the sink and incorporates an integrated tap hole overflow system, that allows a higher level of water to be contained in the bowl without compromising on safety.

Teflite™ was introduced into the Astracast range with the developer in mind. With its resistance to chipping, scratching and staining, Teflite™ represents good value for money. It is heat resistant to 140°C and is backed by a 5 year Astracast guarantee.

The **Spacesaver** has been designed where space is at a premium. With an elegant drainer pattern, wide sauce tray and a range of colour choices, the Spacesaver will complement most contemporary kitchen designs.

The **Sierra 2** is a stylish member of the Astracast range developed with the budget aspirations of developers in mind, without compromising on the aesthetic demands of homeowners. Available in either single or one and a half bowl configurations, each has a stylish drainer pattern and patented drainer support system.

The Astracast ceramic sink collection offers a range of graceful designs from the traditional styling of the Belfast to the more contemporary styled Sudbury sink. Astracast ceramic sinks are all individually handcrafted and finished in fireclay. Ceramic sinks offer a hard non-porous surface giving excellent resistance to all commonly used chemicals and detergents, to abrasions, acids, alkalis and extreme of hot and cold temperatures.

The Belfast and Sudbury are timeless classics. They bring charm and prestige to any traditional kitchen. Individually hand crafted and finished in fireclay, Astracast ceramics are silky to touch with a tough non-porous surface available only in Classic White.

WASTE DISPOSAL UNITS

Astracast waste disposal units provide a quick, clean and environmentally friendly method for the disposal of food and kitchen waste. Powerful concealed grinding rings are housed well away from reach and all waste is ground into fine particles for efficient disposal into the drainage system. Models are BEAB approved and are easy to install.

Turbo 100 WD0001
Turbo 200 WD0002

CHOOSE TASTE

Making and keeping water safe means water companies have to use chemicals like chlorine that can significantly affect taste and odour. In addition natural sediment and other non-harmful contaminants can end up making our water taste and look anything but fresh.

Springflow®, however, transforms this into natural fresh tasting and odourless water that is a sheer pleasure to drink!

Springflow® filter taps combat odours and contaminants in your water supply to improve the appearance and taste of tap water, dramatically reducing chlorine by up to 99%.

Our Springflow Filter will reduce:

- Chlorine
- Pesticides
- Solvents
- Sediment
- Dirt
- Rust

To give you fresh, crystal clear natural tasting filtered water in your own home.

CHOOSE HEALTH

Water is an essential component of life. We can't live without it.

In the UK we take it for granted that we have safe drinking water on tap. Springflow® goes even further; combating herbicides, pesticides, insecticides and other organic chemicals – making it not just taste better but healthier too!

CHOOSE SPRINGFLOW®

You can't choose the quality or source of your tap water, but with a Springflow® filter tap you can transform your normal mains supply into fresh, natural tasting filtered water at the touch of a handle.

Springflow® filter taps give additional protection against chemicals that may be present in the mains supply, reducing chlorine by up to 99% and filtering out sediment, dirt and rust whilst leaving the minerals essential to good health.

Springflow® pure filtered water

• Springflow® enhances the taste of soft drinks, tea, coffee and even food, when used for cooking.

• Springflow® reduces the build-up of lime scale extending the life of appliances including kettles.

• Springflow® treats up to 2,500 litres of water, around six months use, with just one cartridge.

At the turn of a handle Springflow® taps dispense an endless supply of refreshing crystal clear water, it couldn't be easier!

CHOOSE SIMPLICITY

Our patented valve system means there is no need for additional handles or fuss – just push the cold handles back to dispense fresh filtered water.

Our filter, hidden away under the sink can be mounted in any position, horizontal or vertical – to best fit the space you have to offer. When it comes to changing the filter you don't need a new unit just open up the discreet casing and pop in a new cartridge. No mess, no hassle, just great tasting water.

CHOOSE ECONOMY

A typical bottle of water would cost up to 30 x more than Springflow® filtered water, and with Springflow® there is no plastic waste.

CHOOSE DESIGN...

Our current range features a tap for every kitchen. (see next page)

Order code: TP0518

(Standard Taps)

Order code: TP0519

(Pull-Out Taps)

On occasion, depending on the type of sink and weight of the tap being fitted, a tap may require additional support. This product is designed to reduce the amount of sway of the tap when it is being used and to minimise any potential long term damage to sinks, taps or pipework.

This product is particularly applicable to the following conditions:

- The tap is fitted to a budget inset stainless steel sink.
- The sink is a single bowl model, or has a large drainer section.
- Taps using flexible connectors rather than rigid copper tail pipes.

The **BS1010** range of taps and mixers conform to British Standard 1010 – a dimensional standard for product quality, design and manufacture. All Astracast BS1010 taps are manufactured using components that are common and interchangeable with BS1010 taps from all other UK manufacturers allowing for a standard fitting technique as well as simple repairs and replacement where necessary.
