

SCALEMASTER®

NEW & IMPROVED

THE BEST LIMESCALE INHIBITORS JUST KEEP GETTING BETTER

Scalemaster® announces the launch of its improved range of 'in-line' Limescale Inhibitors with *Speedfit*® fittings for domestic applications. Featuring re-engineered limescale prevention technology, the products deliver even better performance than the out-going market-leading units.

The original Scalemaster® Electrolytic unit is still the only water conditioning product on the UK market proven to extend boiler lifetime by up to 50% by preventing limescale precipitation in hard water areas*. The new model incorporates patented improved design features which enhance performance even further.

With bespoke design end caps incorporating *Speedfit*® connection fittings, developed in conjunction with John Guest International Limited, the new units come with the reassurance of a no-quibble two year replacement guarantee.

When replacing boilers and water heaters in hard water areas, fitting Scalemaster® Limescale Inhibitors helps installers comply with the minimum provisions for water treatment specified in Part L of the Building Regulations. Preventing limescale can deliver energy savings of up to 25% over the life of a boiler.

PRODUCT DETAILS

15mm Scalemaster Magnetic Speedfit: Order Code 400105
15mm Scalemaster Electrolytic Speedfit: Order Code 401010
Available individually or in boxes of 10
