

Differential Pressure
Sensors

QBM66...

for air or nonaggressive gases

- Pressure-linear characteristic with selectable pressure measuring range
- Operating voltage AC 24 V or DC 13.5...33 V
- Output signal DC 0...10 V
- Delivery with tubing connection set

Use

For acquiring the differential pressure of air or nonaggressive gases in ventilation, air conditioning and heating plant.

The differential pressure sensors are used to:

- Acquire over- or underpressure in air ducts in relation to ambient pressure
- Monitor filters and to control fans
- Acquire pressure differentials between different rooms

Type summary

Type reference	Measuring ranges		Output signal
	Range 1	Range 2	
QBM66.201	0... 100 Pa	0... 200 Pa	DC 0...10 V
QBM66.202	0... 250 Pa	0... 500 Pa	DC 0...10 V
QBM66.203	0...1500 Pa	0...3000 Pa	DC 0...10 V
QBM66.204	0...500 Pa	0...1000 Pa	DC 0...10 V

Ordering and delivery

When ordering, please give name and type reference, e.g.
differential pressure sensor **QBM66.201**.

The differential pressure sensor is supplied complete with tubing connection set including 2 air duct probes (ABS), 4 fixing screw and 2m plastic tubing (PVC).
Additional accessories are to be ordered separately.

Accessories

Two sets of air duct probes are available for precise measurements, see datasheet CA1N1589E for details. Mounting brackets are available additionally.

Type reference	Name
AQB2000	Mounting bracket for mounting the sensor on lagged ducts
AQB21.2	Bracket (5 pieces) for top hat rails to DIN, HT 35-7.5
FK-PZ1	Air duct probe, short, stainless steel, with elastic lead-through for simple, quick and airtight mounting
FK-PZ2	Air duct probe, long, aluminium, with orifice plate for precise measurements

Equipment combinations

Any systems or devices capable of acquiring and handling the sensor's DC 0...10 V output signal.

Mode of operation

The sensor acquires the differential pressure with a silicon rubber diaphragm. The deflection of the diaphragm is sensed and converted to an electrical signal. A DIL switch is used to match the measuring range on an individual basis.

The sensor's electronic circuit generates a pressure-linear signal, which is calibrated and temperature-compensated.

It is delivered by the sensor as an analog DC 0...10 V output signal.

Sensor characteristics of
measuring ranges 1 ()
and 2 ()

Legend

U_A Output voltage in V

  DIL switch positions

For detailed information on accuracy, refer to "Technical data".

The differential pressure sensor is designed for wall or ceiling mounting. It consists of the following components:

- Sensor housing with mounting bracket, cable entry and removable snap-on cover with safety screw
- Pressure chamber with diaphragm and ceramic lever
- Printed circuit board with connection terminals and DIL switch for selecting the measuring range

Display, setting and connection elements

Legend

- 1 Label with sensor characteristics for measuring ranges 1 and 2
- 2 Cable gland entry Pg 11 (without cable strain relief)
- 3 DIL switch for selecting the measuring range:
Measuring range 1 = bottom position 
Measuring range 2 = top position 
Factory-set calibration position = top 
- 4 Nipple for tubing connection (-), for the lower pressure side (higher vacuum)
- 5 Terminal block
- 6 Safety screw for hinged cover
- 7 Nipple for tubing connection (+) for the higher pressure side (lower vacuum)

Engineering notes

The transformer used must be suited for safety extra low voltage (SELV); it must have separate windings and be designed for 100 % duty.

Transformers are to be sized and fused in compliance with local safety regulations.

The permissible cable lengths must be observed.

If cable lengths exceed 50 meters and run parallel to mains cables, shielded cable should be used!

Mounting notes

The differential pressure sensor is suited for direct mounting on air ducts, walls or ceilings and in control panels.

The sensor should be mounted vertically.

To ensure the degree of housing protection specified in "Technical data", the pressure connecting nipples must be pointing downward and should always be located higher than the air duct probes.

Horizontal mounting (with the hinged cover at the top or bottom) IS NOT RECOMMENDED. If horizontal mounting is a requirement, measured value deviations must be taken into consideration (refer to "Factory calibration" below).

⚠ Caution

If the pressure connection nipples point upward or are at a lower level than the air duct probes, condensation can collect inside the sensor, causing damage to the device.

When mounting on 35 x 7.5 top hat rails to DIN, mounting bracket **AQB21.2** is required which is available as an accessory item. The sensor snaps on the bracket.

For direct mounting on lagged ducts, the sensor can be fitted with an **AQB2000** mounting bracket (see "Accessories").

A 2 m length of plastic tubing is supplied with the sensor and can be adapted to the duct probes on site. The tubing with the higher pressure (lower vacuum) must be connected to nipple "P1" or "+" while the tubing with the lower pressure (higher vacuum) must be connected to nipple "P2" or "-".

The sensor is supplied with mounting instructions.

Factory calibration

The values specified in "Technical data" are valid only if the sensor is mounted vertically.

Should it be necessary to mount the sensor horizontally (with the hinged cover at the top or bottom, not recommended), measured value deviations must be taken into account.

Recommended orientation: Hinged cover in vertical position.
Signal: As per factory calibration

NOT RECOMMENDED:
Hinged cover facing downward.
Signal: Approximately 13 Pa higher than the effective pressure

NOT RECOMMENDED:
Hinged cover facing upward.
Signal: Approximately 13 Pa lower than the effective pressure

Technical data

Electrical interface

Power supply	Safety extra low voltage (SELV, PELV)
Supply voltage	AC 24 V \pm 15 %, 50/60 Hz or DC 13.5...33 V
Power consumption	< 0.5 VA
Current draw	< 10 mA
Output voltage	DC 0 ...10 V
Burden (R_{Load})	> 10 k Ω
Output	not galvanically separated, 3-wire connection, short-circuit-proof, protected against reversed polarity

Functional data

Measuring range	see "Type summary"
Sensing element	piezoresistive (silicone diaphragm, ceramic lever)
Measuring accuracy when mounted in recommended orientation and at ambient temperature of 25 °C, measuring range 2	(FS = Full Scale)
Total error	< \pm 3 % FS
TC zero point	< \pm 0.1 % FS / °C
TC sensitivity	< \pm 0.05 % FS / °C
Time constant t_{63}	< 1 s

	Tolerable overload on one side	10 000 Pa
	Rupture pressure	2 × overload at room temperature 1.5 × overload at 70 °C
	Media	air and nonaggressive gases
	Perm. temperature of medium	0...70 °C
	Maintenance	maintenance-free
Connections	Electrical connections	
	Screw terminals for Cable entry	max. 3 × 1.5 mm ² cable entry gland Pg 11, (without strain relief)
Protective data	Pressure connections	plastic nozzles 6.2 mm dia.
	Degree of protection (in recommended position)	IP 42 to IEC 60 529
	Safety class	III to EN 60 730
Environmental conditions	Operation to	IEC 60 721-3-3
	Climatic conditions	class 3K5
