With CUBIC, Friis & Moltke Design – a defining force in Danish architecture – has developed a tap that displays cubism in its purest form. The surfaces of the models in this collection are highly polished and chrome-plated, reflecting their surroundings like a mirror. Scandinavian purism in inimitable form.

Drawing 1
Area of displacement and spout length

Special technical features of concealed single lever basin mixer H2037 and H2036

By moving the cover rosette varying installation depths up to 30 mm of the build-in part H2070NU can be covered (see drawing 1, measurements A). Due to this the spout length (measured from the tiles) may vary between 179 and 209 mm. To allow for special installation situations we offer the additional spout H3924AA (Standard = 116,5 mm) as a separate part with a customer specific length between 45 and 350 mm (see drawing 1, measurement B).

Special features of the Geometry line

Due to the minimalist design there are some technical peculiarities that need to be considered during **planning and installation.**

All build-in fittings (concealed single lever mixers, concealed thermostats, concealed multi-way valve, wall elbow etc.) have **unique build-in parts,** especially designed for the Geometry line!

These products show the remark **“complete with trim and concealed parts“** or **“with special concealed parts“** for the wall elbow.

The packaging of these products contains the rough (part to be build in the wall) and the trim (visible parts like face plate and handles) in a common box with a common article number.

The same is applicable for the wall elbow (F1631AA) and the personal hand shower assembly (F1358AA) !

Geometry A6 fittings are suitable for wall thickness up to 73 mm. Should the wall be thicker than this, extension pieces as shown on page 246 will need to be specified.

Due to these reasons it is mandatory to have all fittings available that are containing build-in parts (also wall elbows) prior to the installation.

Notes

Installation instructions for 3- and 4-hole Roman tub sets

Our installation system offers a modular structure, which only uses the product components, which are required by the actual planning situation.

The complete system consists of the following components:

– mounting frame
– basic holding system for mounting frame
– hose box

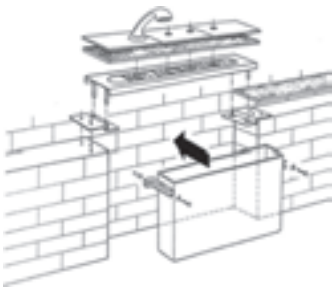
The **mounting frame** can be alternatively mounted on the **basic holding system** or can be installed in a wall niche and does not require any additional trim parts.
The whole fitting unit, fixed on the mounting frame, can be also removed again easily.

The optimal under construction would be the JADO **basic holding system,** which is adjustable in many various ways and therefore fits almost every room situation.
The basic holding system will be covered in a timesaving dry-building-process.

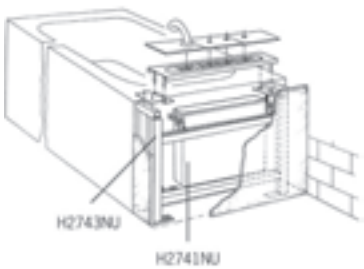
The basic holding system does also include the holding fixtures for the **hose box,** which can be additionally installed against possible dripping water of the hand showers.
The draining of the hose box works over the tub waste fittings.
The usage of the hose box is possible in both kinds of construction, wet-building-process as well as dry-building-process.

With the elements listed there are the following combinations available:

– Mounting frame in wall niche
– Mounting frame with basic holding system for mounting frame
– Mounting frame with basic holding system and hose box



Assembly version 1 (wet-building)



Assembly version 2 (dry-building)

Technical Information on „Concealed Thermostats“

Basically our thermostats offer many different choices of planning a concealed installation situation.
The 1/2” as well as the 3/4” thermostat have an upward outlet with shut-off-valve and one downward outlet without shut-off-valve (closed with a blind plug).

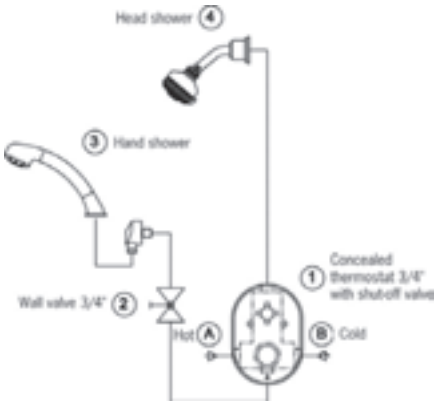
The respective flow rates of each thermostat are mentioned in the pricelist. These flow rates are a guide line for planning, based on a water pressure of 3 bars.

For a better understanding of this information we describe in the following two possible planning varieties of a concealed shower installation.

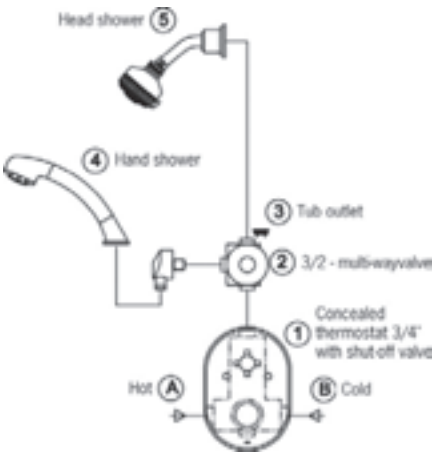
The customer requires:

– a head shower (rain shower with a diameter of 240 mm)
– a hand shower

Due to the fact, that the rain shower 240 mm supplies about 32 litres at 3 bar water pressure, we decide for the 3/4” concealed thermostat.



Note: all head showers useable



Note: all head showers useable

Technical Information on Low Pressure Fittings

Fittings, which are marked with this sign, are meant to be used in combination with a pressureless water heater.

Technical Information on „Supply Hoses“

Supply hoses are neither included in the widespread lavatory sets nor in the bidet sets.

The reason for this is that a large quantity of these fittings is mounted with visible hoses.
In these cases we use small copper tubes (flanges) with a diameter of 10 mm and a decorative surface.
The colours are listed under the category “General items”.

When placing your purchase order for a widespread lavatory or bidet set, please decide which version you prefer and order the items needed separately.

Technical Information on about Roman tub sets

In the case of Roman tub sets with a vertical hand shower, it is possible that, for technical reasons, water will drop from the hand shower onto the edge of the bathtub after the fitting has been turned off.

Guarantee and Care Instructions

Guarantee and Care Instructions

Our confidence in the quality and reliability of our products enables us to guarantee all mixers and taps for five years from date of purchase. Parts are guaranteed for five years and will be replaced if found to be faulty. The guarantee does not cover general wear and tear.

Our guarantee is offered on all products that have been used in the manner for which they were intended and does not apply to any products that have been misused or abused in anyway. Products must be installed and cared for in line with our fixing instructions and local water bye-laws.

In the unlikely event the product fails within 5 years, we offer a free replacement or replacement part (or nearest equivalent). Liability is limited to individual products and does not cover consequential loss or damage to or from installations.

We do not accept any liability for: damage caused by inappropriate or incorrect use, defective installation or commissioning by the customer or any third party, normal wear and tear, careless cleaning or failure to clean, improper treatment or maintenance, unsuitable cleaning agents or other chemical influences.

Care instructions: As a general rule, we recommend wiping the fitting dry with a soft cloth after each use. In the case of light dirt, it is sufficient to clean the fitting with soap and a wet cloth. To care for the fitting, we recommend you to use a special acid-free cleaning agent tested by us, which you can order from us through retailers stating the article number H960777NU.

Problems with deposits of dirt and lime scale in aerator and shower sieves are easy to rectify. Simply remove the aerator using the Jado aerator key (Art. no. H960776AA), knock out the sieve insert and rinse through thoroughly with water. The shower sieves can be unscrewed and removed.

For intensive cleaning, we recommend immersing the sieves in water containing up to 10% vinegar at 20°C. After soaking for 2-5 hours, the sieves must be thoroughly rinsed with water.

Please avoid using cleaning agents which contain hydrochloric acid, formic acid, acetic acid, phosphoric or chlorine bleaching substances. Also avoid abrasive cleaners and scouring pads.

If these Care Instructions are not followed, guarantee claims may be denied.

The standards of Jado:

2 handle fittings	-	EN 200
Single lever fittings	-	EN 817
Thermostatic fittings	-	EN 1111
