

Inset Elite Brass

Freestanding Classic Brass

Freestanding Elite Brass

Freestanding Classic Chrome

Freestanding Elite Chrome

Flame-effect fan convectors that run off the central heating system, but with all the visual appeal of a real fire – a beautiful feature in any room. Efficient, cost effective and totally safe, with no harmful discharges. Ideal for children and the elderly because there are no flames or hot surfaces. Available in Inset or Freestanding and a choice of eyecatching designs. Hydroflame Classic and Elite can be supplied with an attractive choice of trims and complementary fireplace surrounds.

Independent tests\* show that fan convectors are at least 24% more energy efficient than a panel radiator in heating up a room.

\*Tests carried out by BSRIA (Building Services Research and Information Association) in August 2008

## Hydroflame® Simplicity Fireplace Suite

The Simplicity Fireplace Suite combines the revolutionary Hydroflame flame-effect fan convector with a choice of beautiful fireplace surrounds and mantels as part of a convenient, single package.

The Simplicity Fireplace Suite can be used with any of the Elite or Classic Inset models.

### An attractive choice of fireplace surrounds

The fireplace surrounds, designed specifically for use with Hydroflame, are available in an eye-catching choice of effects and finishes:

- 1 Cream with cream back plate and hearth
- 2 Yew with black back plate and hearth
- 3 Yew with cream back plate and hearth
- 4 Antique Oak with black back plate and oak hearth
- 5 Antique Oak with cream back plate and oak hearth

### Benefits

The Simplicity Fireplace Suite offers significant benefits over those available from other suppliers:

- The depth of the fireplace rebate allows for all Hydroflame Inset models to be fitted with the fireplace against a flat wall
- There are several access positions in the hearth to accept the central heating pipe work
- The mantel and legs are removable from the hearth for easier access during installation

## How Hydroflame® Works

Flame-effect fan convectors require connection to the wet central heating system and an electrical connection to run the flame-effect and fan.

Hot water from the central heating system passes through a heat exchanger and transfers its heat to the aluminium fins.

Cooler air is drawn in at floor level and used to create the flame-effect. The air is heated as it passes over the heat exchanger, a patented process that creates a realistic flame-effect, and then expelled gently back into the room.

This gives a more even temperature and will heat a room in much less time than a traditional panel radiator.

The fan will not come into operation until the central heating system water passing through the heat exchanger reaches 40°C (or the temperature set by the installer). This ensures that cooler air is not circulated at start up and allows Hydroflame to switch on and off automatically in conjunction with the central heating system.

Flame-effect fan convectors are energy efficient and in the home will add less than £10.00\* to your annual heating bill.

Dual models include an electric heating element – ideal in spring and summer when you may need a quick warm up but the central heating system is switched off.

Note: \*based on electricity charged at 15p/kWh.

Model	Room Size Guide*(m³)	Heat Output Δt 60°C		Heat Output Δt 50°C		Sound Levels		Trim Colour	Flame-Effect Only
		Normal kW (Btu/h)	Boost kW (Btu/h)	Normal kW (Btu/h)	Boost kW (Btu/h)	Normal (dBA)	Boost (dBA)		
<b>Hydronic</b>									
Inset (Classic & Elite)	43	1.5 (5100)	2.0 (6800)	1.2 (4100)	1.6 (5500)	27	43	Brass or Chrome	•
Freestanding (Classic & Elite)	43	1.5 (5100)	2.0 (6800)	1.2 (4100)	1.6 (5500)	27	43	Brass or Chrome	•
<b>Hydronic/Electronic (Dual)</b>

\*Room sizes given in cubic metres for general guidance only based on normal heat output (Δt 60°C) for domestic applications - always calculate heat losses. Δt 60°C assumes a mean water temperature of 80°C and room temperature of 20°C. Δt 50°C assumes a mean water temperature of 70°C and room temperature of 20°C. Hydronic outputs tested in accordance with BS 4856. Dual models include an electric element which in electric heating mode will emit 1.5kW of heat. Sound levels measured at 1.5m.

Model	Flow & Return Connections	Mains Cable	Transformer	Flexible Hoses	Isolating Valves	Fused Spur	Power Consumption		Water Capacity (Litres)
							Normal Watts	Boost Watts

### Hydroflame® Classic & Elite

Connects to and runs from your central heating system (hydronic mode).

#### Installation

- Inset model designed for a recess 400mm x 550mm high
- Unit must be earthed
- Suitable for two-pipe central heating systems only
- Surface temperature of the casing complies with the safety requirement DHSS DN4

#### Commissioning

Check water temperature is hot enough to activate low temperature cut-out device (LTC).

#### Controls

Two rocker switches: normal/off/boost, flame-effect on/flame-effect off.

Variable low temperature cut-out device factory set to energise fan at approximately 40°C (104°F). Set temperature can be adjusted higher or lower during installation.

Built-in room thermostat.

### Hydroflame® Dual Classic & Elite

Connects to and runs from your central heating system (hydronic mode), but also includes an electric heating element for use when the central heating is switched off.

#### Installation

- Inset Dual model designed for a recess 400mm x 550mm high
- Unit must be earthed
- Suitable for two-pipe central heating systems only
- Surface temperature of the casing complies with the safety requirement DHSS DN4

#### Commissioning

Check water temperature is hot enough to activate low temperature cut-out device (LTC).

#### Controls

Three rocker switches: normal/off/boost, hydronic/electric, flame-effect on/flame-effect off.

Variable low temperature cut-out device factory set to energise fan at approximately 40°C (104°F). Set temperature can be adjusted higher or lower during installation. Built-in room thermostat.

### Hydroflame® running costs

(Models fitted with 11W energy-saving long-life bulb)

Annual Usage (Hours)	Running Costs (£)		
	11W Bulb	29W Fan	Annual Total
1100	1.82	4.79	6.60
1300	2.15	5.65	7.80
1700	2.81	7.39	10.20
2500	4.13	10.87	15.00

#### Assumptions

Electricity charged at 15p per kWh. Hydroflame operating on normal - 1.5kW heat output. Excludes use of electric heating element.

## Technical Information

Hydroflame hydronic flame-effect fan convectors are the environmentally friendly product of choice for living room heating. Once you appreciate the benefits and efficiencies of Hydroflame, electric, gas or open fires are simply not an option.

### Completely safe

Hydroflame is safe because it uses water from the central heating system to produce heat.

- No independent gas supply needed
- No flue gases are produced – so a flue and CO detector are not required
- No live flames, hot coals or elements
- Low surface temperatures
- No special ventilation required
- Hidden fixings for extra security
- No minimum room size

### A beautiful focal feature in the room

Stylish and attractive appearance characterises Hydroflame's innovative design.

- Fit on any internal or external wall surface, into a fireplace opening, or in front of a fireplace surround
- Can be used simply to replace an existing panel radiator
- Can show a comforting flame-effect with or without the heating being switched on

### Simple controls

Operating Hydroflame could not be simpler.

- Clearly labelled, easy action rocker switches
- Easy to use by elderly or infirm people

### Minimal running costs

Hydroflame has a unique method of operation that brings significant savings on running costs.

- Operates as part of the central heating system, where average usage on normal heat output will add less than £10.00 a year to annual heating bills (excluding any separate use of the electric heating element on Dual models). See table of running costs

### Environmentally friendly

Hydroflame has less of an impact on the environment than electric, gas or open fire alternatives.

- No harmful gases expelled to the atmosphere
- Automatic response to water temperature, providing the correct amount of heat when needed
- Thermostatically controlled
- Slower fan speed for flame-effect only reduces energy consumption
- Energy saving light bulb

### Easy to install

Hydroflame is economical and straightforward to install

- No gas supply or flue required – fix to any wall, internal and external
- No chimney or flue liners required
- Inset models fit standard fireplace openings – no need for a replacement surround
- Flexible hoses, isolation valves and pre-wired electric cable supplied as standard
- Connects to standard central heating pipe work

For full installation instructions refer to the Hydroflame Installation & User Guide, which is available on request; or download it from [www.smiths-env.com](http://www.smiths-env.com).

### Low maintenance

Cost effective and convenient.

- No need for annual servicing or safety checks – so no access to the property is required
- Easy to change the lamp
- Easy for homeowner to clean the filter system

### Very low water content

Each Hydroflame has a very low water content of 0.36 litres, around 5% of the water content of an equivalent output steel panel radiator.
